

Information about Acrylic, and how to care for this item.

Acrylic

Acrylic is a molded plastic that is transparent, shatterproof, and of course, very fashionable. Acrylic does not yellow, and resists damage from sunlight. Some well-known brands of acrylic are Lucite, Plexiglass, and Lexan.

The acrylic products we offer, are made from high-quality plastics, and with the proper care, should last many years. Please note that minor bubbles and imperfections in the plastic are a result of the manufacturing process. There may also be some visible marks from the cutting and fabrication of the item. This is normal and should be expected.

How to care for your acrylic product:

- The best way to wash your acrylic product is by hand with cold water. Dishwashers, heat, and rinsing agents are a known cause of crazing and cracking in acrylic.
- Wash with a mild detergent and a soft cloth or sponge, and immediately dry with a soft cloth.
- Do not use any abrasive pads, harsh or abrasive cleansers, or chemicals.
- Please remove the personalized insert before cleaning.
- Do not place item in the microwave or any type of oven.
- There are special polishes available for removing minor scratches and haziness from acrylic surfaces, available at your local housewares store.
- If you need to remove any sticky residue from the acrylic, use an oil-based lubricant or pure vegetable oil **only**. Other products such as paint remover, nail polish remover, or turpentine, will damage the acrylic.

Personalized Inserts:

- CARDSTOCK INSERTS are not water resistant, and can be damaged by water and other liquids. Although the paper is inserted into a compartment at the bottom of the tray, the area is not water-tight. Please keep the tray away from significant amount of liquid, avoid placing the tray in a puddle of water, and do not leave outdoors during the rain. Additionally, please remove the paper insert before cleaning the tray.
- PLASTIC INSERTS are water resistant and very durable, and may be wiped clean with a mild detergent. This should not be placed in a dishwasher, and must be kept away from heat, as it might deform the plastic. Please remove the personalized insert before cleaning.

If these guidelines are followed, your tray and personalized inserts should last for quite a long time.
